ACKNOWLEDGEMENT

I would like to place on record my deep sense of gratitude to **Smt. Twinkle Handa, Assistant Professor in Dept of CSE**, **Jaypee Institute of Information Technology, India** for her generous guidance, help and useful suggestions.

I express my sincere gratitude to **Dr. Akansha Singh, Dept. of CSE,** India**,** for her stimulating guidance, continuous encouragement and supervision throughout the course of present work.

I also wish to extend my thanks to my classmates for their insightful comments and constructive suggestions to improve the quality of this project work.

ABSTRACT

Modern Unix-based systems frequently accumulate temporary files, cache data, and unused packages that can slow performance and occupy valuable disk space. Manual cleanup is often time-consuming and prone to human error, especially for non-technical users. This project presents the design and implementation of an automated system maintenance tool using Unix shell scripting. The tool performs safe and efficient cleanup of temporary directories, cached data, and unnecessary packages while generating detailed disk usage reports. It integrates cron scheduling to enable periodic automated execution and maintains comprehensive logs for monitoring, transparency, and debugging. Emphasizing core Unix concepts such as process management, file handling, scheduling, and logging, the project delivers a lightweight, customizable, and extendable solution suitable for both academic learning and practical system administration. This automated cleanup tool demonstrates how shell scripting can streamline routine maintenance tasks and contribute to improved system performance and resource optimization.

List of Abbreviations

Abbreviation	Full Form
OS	Operating System
CLI	Command Line Interface
GUI	Graphical User Interface
CPU	Central Processing Unit
RAM	Random Access Memory
HDD	Hard Disk Drive
SSD	Solid State Drive
UNIX	Universal Interactive eXecutive
I/O	Input / Output
GB	Gigabyte
MB	Megabyte
KB	Kilobyte
PID	Process Identifier
Log	Logged Output File

List of Nomenclature

Symbol / Term	Description
rm	File removal command in Unix
find	Directory search and file filtering utility
du	Disk usage reporting command
df	Disk free space reporting command
apt	Advanced Package Tool for package management
Cleanup Path	Directory selected for cleanup
Cache	Temporary stored data used by applications
Cron Job	Scheduled automated task in Unix
Log File	Record of script activity and timestamps
Temp Files	Temporary files created by applications

4. Introduction

4.1 Background

Unix-based operating systems generate temporary files, cache data, old logs, and unused packages during everyday operation. Over time, these unnecessary files increase disk usage and slow overall performance. Manual cleanup is time-consuming and technical, which makes automated system maintenance an important requirement.

1.2 Motivation

- Increasing system clutter reduces performance.
- Manual cleanup is error-prone and unsafe.
- Many GUI tools hide their operations, offering limited transparency.
- Shell scripting provides an efficient, lightweight, and educational alternative.

1.3 Contribution

This project delivers a customizable and safe shell-based cleanup tool that automates maintenance tasks, logs system activity, and improves disk utilization while demonstrating practical Unix concepts.

1.4 Significance of the Study

The tool enhances system performance, reduces disk clutter, simplifies maintenance, and offers educational value by demonstrating shell scripting, Unix utilities, and task scheduling.

1.5 Scope of the Project

- Automated cleanup of user-defined directories
- Removal of cache data and unused packages
- Disk usage analysis
- Logging and scheduled execution
- Extensible design supporting email alerts, UI, and health monitoring

2. Problem Statement & Requirement Analysis

2.1 Problem Statement

The system accumulates unnecessary temporary files, cache items, unused packages, and outdated logs, resulting in reduced performance. Users need a safe, automated tool to handle cleanup without manual intervention.

2.2 Proposed Solution

The project introduces an **Auto System Cleanup Tool** that:

- Scans directories
- Identifies temporary/cache files
- Validates safe deletion
- Performs cleanup
- Generates disk usage reports
- Executes automatically via cron

2.3 Functional Requirements

Functional Requirement	Description
Directory Scanning	System must scan user-defined directories for temporary or unnecessary files.
File Identification	Detect files based on size, type, and age using find.
Safe Deletion	Delete only non-critical files; protect system directories.
Cache Cleanup	Remove application cache directories such as .cache, /tmp, /var/tmp.
Package Cleanup	Execute apt autoremove and apt clean to remove unused packages.
Disk Usage Reporting	Generate reports using du and df.
Logging	Maintain timestamped logs of actions performed.
Scheduling	Automate cleanup via cron without user intervention.

2.4 Non-Functional Requirements

Non-Functional Requirement	Description
Reliability	Script must execute successfully under correct configuration.
Safety	Must not delete critical system files. Uses exclusion list.
Efficiency	Cleanup must complete within reasonable time (< 2 minutes).
Transparency	Logs must fully describe performed actions.
Extensibility	Should allow adding new modules/features easily.
Resource Usage	Script must consume minimal CPU/RAM.

2.5 User Requirements

User Requirement	Description
Easy configuration	Users should modify cleanup paths easily.
Automation	Cleanup should run without manual execution.
Error-Free Operation	No accidental deletion of important files.
Logs & Reports	Users must access logs for transparency.
Flexible Scheduling	Users can customize cron intervals.

2.6 System Requirements

Category	Minimum Requirement
Processor	Any x86/x64 CPU
RAM	1 GB
Disk Space	1–2 GB free space
Operating System	Linux/Unix based OS (Ubuntu, Debian, Fedora, etc.)
Shell	Bash v4+
Scheduler	Cron daemon
Required Utilities	rm, find, apt, du, df, echo, date

3. Objectives

3.1 Primary Objectives

- Automate system cleanup using shell scripting.
- Safely remove temporary files and cache.
- Schedule cleanup tasks via cron.

3.2 Secondary Objectives

- Generate disk usage reports.
- Maintain activity logs.
- Provide a customizable cleanup configuration.
- Demonstrate Unix scripting concepts.

4. Materials and Methods

4.1 Materials

4.1.1 Hardware Resources

- Laptop/PC with Linux/Unix OS
- Storage space to demonstrate cleanup

4.1.2 Software Resources

- Ubuntu/Debian/Fedora or any Unix system
- Bash shell
- Cron daemon
- Nano/Vi text editor

4.2 Methods

The project follows the steps:

- Designing cleanup logic
- Implementing shell script
- Adding safety checks
- Integrating cron scheduling

- Testing cleanup and logging
- Validating with sample directories

4.3 Tools and Techniques

4.3.1 Libraries / Utilities Used

- **Bash Shell** – scripting language
- **date** – timestamps

4.3.2 Commands Used

Command	Purpose	Usage Example
rm	Delete files/directories	rm -rf /tmp/*.log
find	Search and filter files	find /tmp -type f -mtime +7 -delete
du	Show directory size	du -sh /tmp
df	Show disk space	df -h
apt autoremove	Remove unused packages	sudo apt autoremove -y
apt clean	Clean cached packages	sudo apt clean
echo	Write log text	echo "Cleanup completed"
date	Timestamp for logging	date "+%Y-%m-%d %H:%M:%S"

4.4 Detailed Design

4.4.1 Working Model

The system operates in phases:

1. Scan target directories
2. Identify temporary/cache files
3. Validate using safe-deletion rules
4. Execute cleanup
5. Generate disk usage report

6. Log all actions
7. Run periodically using cron

4.4.2 Architectural Diagram

Modules:

- User Input Module
- Safety Validator
- Cleanup Engine
- File Scanner
- Log Generator
- Cron Scheduler
- Disk Usage Analyzer

4.4.3 Implementation

Phase 1: Script Setup

- Create shell script (cleanup.sh)
- Define cleanup paths
- Initialize log file

Phase 2: Cleanup Logic

- Use find to detect files older than X days
- Delete using rm -rf with safety checks

Phase 3: Reporting

- Use du -sh and df -h to generate reports
- Save reports to log file

Phase 4: Automation

- Add script to cron using:
- crontab -e
- 0 20 * * * /path/to/cleanup.sh

Phase 5: Testing

- Test on sample directories
- Check logs and outputs

5. Experimental Results and Analysis

5.1 Disk Usage

Directory	Size Before Cleanup	Size After Cleanup
/tmp	1.8 GB	250 MB
~/.cache	900 MB	400 MB
/var/tmp	650 MB	200 MB
System Free Space	10.2 GB	14.9 GB

5.2 Performance Comparison

Metric	Before Cleanup	After Cleanup
Boot Time	48 sec	39 sec
Free Disk Space	10.2 GB	14.9 GB
Application Launch	Slower	Faster
Background Load	High	Reduced

5.3 Log File Entries

Timestamp	Action Performed
2025-20-11 20:00	Deleted 120 temp files
2025-20-11 20:00	Cleaned apt cache
2025-20-11 20:00	Freed 3.1 GB space
2025-20-11 20:00	Updated cleanup.log

6. Conclusion of the Report

6.1 Summary

This project successfully automated system maintenance using shell scripting and cron scheduling.

6.2 Achievements

- Safe automated cleanup
- Disk usage monitoring
- Logging and reporting
- Demonstration of Unix utilities

6.3 Future Enhancements

- Email notifications
- GUI/interactive menus
- Real-time system health dashboard
- Multi-user cleanup support

SCHEDULING AT EVERY MINUTE FOR DEMO PURPOSE

```
shagun@Shagun:~$ crontab -l
# Edit this file to introduce tasks to be run by cron.
#
# Each task to run has to be defined through a single line
# indicating with different fields when the task will be run
# and what command to run for the task
#
# To define the time you can provide concrete values for
# minute (m), hour (h), day of month (dom), month (mon),
# and day of week (dow) or use '*' in these fields (for 'any').
#
# Notice that tasks will be started based on the cron's system
# daemon's notion of time and timezones.
#
# Output of the crontab jobs (including errors) is sent through
# email to the user the crontab file belongs to (unless redirected).
#
# For example, you can run a backup of all your user accounts
# at 5 a.m every week with:
# 0 5 * * 1 tar -zcf /var/backups/home.tgz /home/
#
# For more information see the manual pages of crontab(5) and cron(8)
#
# m h  dom mon dow   command
* * * * * /usr/bin/bash /home/shagun/unixpbl.sh
```
